Information Source: eatingwell.com

FUN Apple Health Facts

1. Nutrition Packing in quite a bit of soluble fiber (4 grams per medium apple) for a modest amount of calories (95) makes apples a filling, sweet snack. Plus, a medium apple counts as 1 cup of fruit, so after eating one you're well on your way to meeting your daily fruit quota. They also are a good source of immune-boosting vitamin C.

2. Weight Loss Apples satisfy hunger for few calories so it's not surprising that they can be part of a healthy diet that promotes weight loss.

3. Heart Health Frequent apple eaters had the lowest risk of suffering strokes compared with nonapple eaters. Experts attribute the heart-healthy benefits to antioxidant compounds found in apples, which help prevent LDL cholesterol from oxidizing and inhibit inflammation. Plus, the soluble fiber in apples has also been shown to lower cholesterol levels.

4. Exercise Extender Eating an apple before you work out may boost your exercise endurance. Apples deliver an antioxidant called quercetin, which aids endurance by making oxygen more available to the lungs.
